

ORBYTS (Original Research by Young Twinkle Students)

Katy Chubb,¹ UCL

Original Research By Young Twinkle Students (ORBYTS) is part of EduTwinkle, the education branch of the exoplanet atmosphere characterisation mission, Twinkle. ORBYTS matches a PhD student or Postdoc with a group of A-level students, aged 16-18 years, to work on a research project related to the spectroscopy of exoplanets. The research projects that have been run as a part of ORBYTS will be discussed, along with the impact the resulting data has had on spectroscopy research within the ExoMol group.
